CUSTOMER NOTES:

Safe-Stow

Autorack are a UK accredited supplier and fitting centre for the Rhino Safe-Stow ladder loading system. The Safe-Stow ladder loading system allows the operator to safely load a ladder to the roof of a van from ground level, thus meeting better health and safety standards. Specifically designed hydraulic rams allow for safe and easy loading of ladders up to 50k/g.

Autorack have designed and manufactured an impressive range of internal van racking and storage systems. Autorack van racking is designed for the professional tradesman. **Strong, versatile, smart and at a market leading price** makes Autorack the sensible choice.

Fully adjustable to fit virtually any van and with various different shelf combinations, **Autorack internal van racking is ideal for many load carrying and storage solutions.**

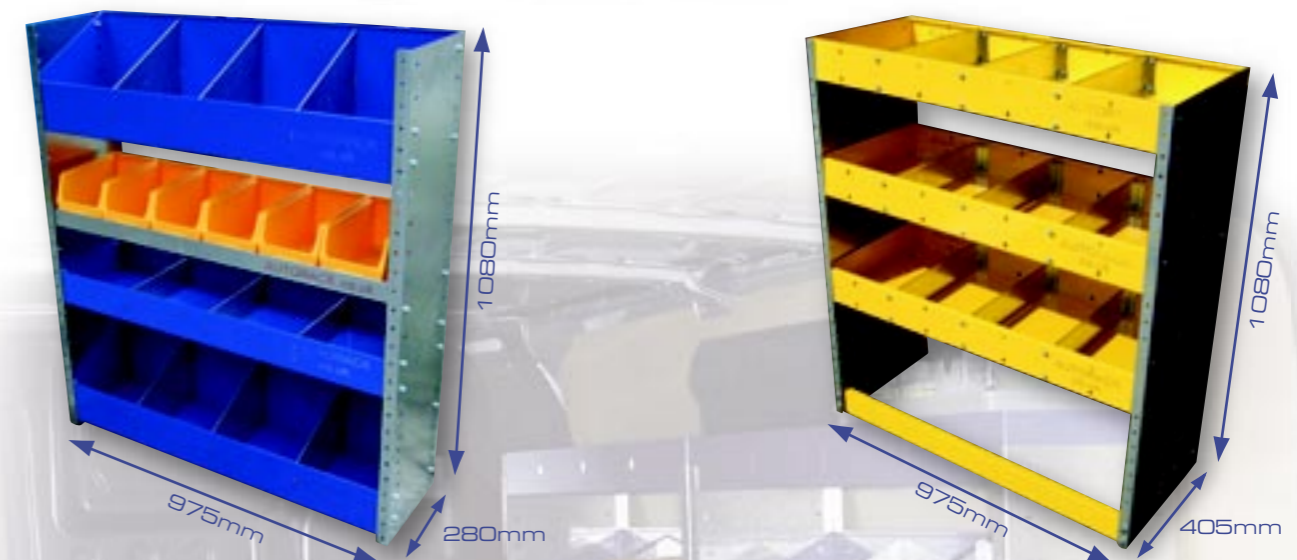

Autorack Standard Heavy-Duty van racking has proved to be a very popular van storage and shelving solution for tradesmen and general service engineers since its launch in 2006. Being only 280mm in depth, it combines excellent storage capacity with compact design thus minimising loss of van floor space. Our standard system has been the choice of various local authorities and utilities.

Extra-Heavy-Duty van racking systems launched in 2009. Designed to meet even greater demands, this system is ideal for users requiring a larger shelf option (405mm depth) and the need to carry and store heavy tools/components. Side packs are manufactured from 1.5mm galvanised steel whilst all trays and bins are from 1.2mm galvanised steel sheet, both, exceeding industry standards. A unique selling feature of both our systems is that they are wholly manufactured from pre-galvanised steel sheet (including all painted components and trays).

Other key features:

- Fully modular construction allows for easy assembly and varied choice of system configuration.
- **FULLY GALVANISED.**
- Manufactured using state of the art CNC punch and bending technology ensures precise accuracy.
- Comprehensive and varied choice of bin/shelf options.
- Designed to be as light-weight as possible without compromising strength. Van payload considered during design process.
- Units can also be used as workshop racking.
- Adjustable to allow fitting to most vans.
- Supplied with universal fitting kit as standard.
- Supplied in flat pack form or built to your requirements if collected from our showroom.
- Mail order to most UK mainland locations.
- Fast (normally off-the-shelf) delivery.

Workshop Racking

Autorack racking systems are ideal for workshop and garage use. They provide a cost effective solution for uses such as motorsport, vehicle repair garages and general tool and component storage environments. The modular design allows users to compile a system that best suits their requirements. Normally available for immediate delivery from stock means that Autorack can meet your workshop racking requirements fast!
